

Durga AI — Legal Shakthi Unleashed

Investor Memo

Founder: Praveen Pandiyan
Company: Evolve Robot Lab
Stage: Early Prototype → Pilot Stage
Sector: LegalTech / AI Automation

The Problem

Legal tech in India never really clicked. Lawyers earned less through platforms. Clients paid more for slower work. The system punished both sides — so nobody trusted it.

The Shift

AI changed the math completely. Lawyers don't need to type every line anymore. They just review, refine, and send. They make more per hour, clients spend less, and for once — the platform actually helps everyone win.

The Solution

That's what we're building with **Durga AI** — an AI-powered legal assistant made for Indian law and Indian lawyers. It's not a chatbot pretending to be a lawyer. It's a digital teammate that drafts NDAs, formats contracts, finds relevant laws, and learns from real Indian legal context.

■ *Legal Shakthi, Unleashed.*

Early Traction

- MVP ready and running smoothly.
- Already tested by practicing lawyers in Tamil Nadu.
- Law firms showing interest in private deployments.
- Colleges in talks for pilot programs to train students with it.

Funding Plan

Stage	Use	Amount	Duration
Seed Stage	Product polish, pilot programs, and early user onboarding	₹40 lakhs	6 months
Growth Stage	Scale to 3 major cities, add multi-language support, and onboarding	₹60 lakhs	12 months

The Vision

Durga AI isn't here to replace lawyers. It's here to give them their time, focus, and power back. By grounding AI in Indian law and culture, we're not just building software — we're building trust in automation for one of India's oldest professions.

This is how law becomes faster, fairer, and more human again. That's **Durga AI** — *Legal Shakthi, Unleashed.*
